CDLIS Access 3.3.6 Release

December 17, 2004

Introduction

The FMCSA Field Systems Team semiannual software release includes CDLIS Access 3.3.6.

The Commercial Driver License Information System (CDLIS) is a network of state driver license systems linked via a central site, which enables national access to any driver license status or history of safety violation convictions.

If you are upgrading to CDLIS Access 3.3.6, you must have CDLIS Access 2.0 or higher installed. Older versions of CDLIS must be uninstalled before CDLIS Access 3.3.6 is installed. As always, remember to back up your work.

Enhancements and Bug Fixes

The following section outlines the various enhancements and fixes that have been made to CDLIS Access 3.3.6.

Configuration

- The Dialing Prefix box can now hold up to 10 characters.
- The Mexican prefix of 001 was added to the Dialing Prefix list.
- The “Dialing from...” option was added to the Configuration Information dialog box. You can now switch between the US CDLIS phone number and Mexico’s dialing prefix.

Technical Support

This document may explain or identify many general questions or issues that you may have noticed with CDLIS Access. However, you may still have concerns or questions. For more information, contact the FMCSA Technical Support Team:
